

AI-Powered Behavioral Anomaly Detection Report

Generated: 2026-07-25 15:26 UTC

Classification: CONFIDENTIAL

Executive Summary

Metric	Value
Total Access Logs Analyzed	9833
Total Anomalies Detected	492
Critical Alerts	0
High Severity Alerts	0
Average Risk Score	86.8%
Report Period	Last 30 Days

Threat Summary

The system analyzed 9833 access events and detected 492 anomalies. No critical threats were identified. Average risk score: 86.8%.

Detected Attack Types

Attack Type	Count	Percentage
Insider Drift	91	18.5%
Lateral Movement	87	17.7%
Device Spoofing	75	15.2%
Impossible Travel	71	14.4%
Low And Slow Exfiltration	67	13.6%
Unknown	62	12.6%
Brute Force	27	5.5%
Credential Stuffing	12	2.4%

Risk Score Distribution

Risk Level	Count
Low (0-25)	0
Medium (25-50)	62
High (50-75)	35
Critical (75-100)	395

Model Performance

Metric	Value
Model Type	IsolationForest
Accuracy	99.3%
Precision	87.4%
Recall	99.3%
F1 Score	93.0%
Training Samples	9833

Recommendations

- Investigate Critical Alerts Immediately** — All alerts with risk scores above 75 should be triaged by the SOC team within 1 hour.
- Enable Multi-Factor Authentication** — Enforce MFA for all user accounts to mitigate credential stuffing and brute force attacks.
- Implement Geo-IP Restrictions** — Block or challenge logins from countries not in the organization's operational geography.
- Deploy Device Trust Framework** — Register and monitor device fingerprints to detect spoofing attempts.
- Review Access Policies** — Audit user access to sensitive resources and enforce least-privilege principles.
- Enhance Monitoring for Off-Hours Activity** — Increase alerting sensitivity for access events outside normal business hours.
- Retrain Model Periodically** — Retrain the anomaly detection model monthly to adapt to evolving behavioral baselines.

8. Conduct Incident Response Drills — Regular tabletop exercises ensure the team can respond effectively to detected threats.
