

AI-Powered Behavioral Anomaly Detection Report

Generated: 2026-07-25 15:22 UTC

Classification: CONFIDENTIAL

Executive Summary

Metric	Value
Total Access Logs Analyzed	0
Total Anomalies Detected	0
Critical Alerts	0
High Severity Alerts	0
Average Risk Score	0%
Report Period	Last 30 Days

Threat Summary

The system analyzed 0 access events and detected 0 anomalies. No critical threats were identified. Average risk score: 0%.

Detected Attack Types

Risk Score Distribution

Risk Level	Count
Low (0-25)	0
Medium (25-50)	0
High (50-75)	0
Critical (75-100)	0

Model Performance

No model has been trained yet. Train the Isolation Forest model to see performance metrics.

Recommendations

1. **Investigate Critical Alerts Immediately** — All alerts with risk scores above 75 should be triaged by the SOC team within 1 hour.
2. **Enable Multi-Factor Authentication** — Enforce MFA for all user accounts to mitigate credential stuffing and brute force attacks.
3. **Implement Geo-IP Restrictions** — Block or challenge logins from countries not in the organization's operational geography.
4. **Deploy Device Trust Framework** — Register and monitor device fingerprints to detect spoofing attempts.
5. **Review Access Policies** — Audit user access to sensitive resources and enforce least-privilege principles.
6. **Enhance Monitoring for Off-Hours Activity** — Increase alerting sensitivity for access events outside normal business hours.
7. **Retrain Model Periodically** — Retrain the anomaly detection model monthly to adapt to evolving behavioral baselines.
8. **Conduct Incident Response Drills** — Regular tabletop exercises ensure the team can respond effectively to detected threats.
